Lab Expt 8: Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using the standard Heart Disease Data Set. You can use Java/Python ML library classes/API

```
[12]: import pandas as pd
import numpy as np
import matplotlib.pyplot as plt
import seaborn as sns
from sklearn.naive_bayes import GaussianNB
from sklearn.metrics import accuracy_score
from sklearn.model_selection import train_test_split
import warnings
warnings.filterwarnings('ignore')
```

```
[13]: data_df=pd.read_csv("./Heart_Disease_Prediction.csv")
print(data_df.head())
print("Shape->",data_df.shape)
```

	Age	Sex	Chest pain type	BP	Cholesterol	FBS over 120	EKG results	\
0	70	1	4	130	322	0	2	
1	67	0	3	115	564	0	2	
2	57	1	2	124	261	0	0	
3	64	1	4	128	263	0	0	
4	74	0	2	120	269	0	2	

	Max HR	Exercise angina	ST depression	Slope of ST	\
0	109	0	2.4	2	
1	160	0	1.6	2	
2	141	0	0.3	1	
3	105	1	0.2	2	
4	121	1	0.2	1	

	Number of vessels fluro	Thallium	Heart Disease
0	3	3	1
1	0	7	0
2	0	7	1

```

3          1          7          0
4          1          3          0
Shape-> (270, 14)

```

```

[14]: # checking for null values
data_df.isnull().sum()

```

```

[14]: Age          0
      Sex          0
      Chest pain type  0
      BP          0
      Cholesterol    0
      FBS over 120    0
      EKG results    0
      Max HR         0
      Exercise angina  0
      ST depression   0
      Slope of ST     0
      Number of vessels fluro  0
